Actionable Safety Intelligence

# Supervisory Panel (SP) – Preparation of 2020's mission (Q4)

**ECA** Piloting  
Safety  
European Cockpit Association

- External expert/consultant support
  - New EASA Framework Contract finalised
  - Selection of a new suitable external expert to support the D4S SP team is ongoing
  - Timing for on-boarding of the selected expert/consultant on the Programme: **second half of October 2020**
  
- Preparatory SP WebEx meeting
  - Timing: **second half of November 2020**
  - Objectives:
    - On-boarding of the new SP members (if any) as well as new external expert/consultant on the Supervisory Panel (role and past missions)
    - Define objectives and work out practical action plan for onsite audit of DPPO Palantir in December 2020 (see next point)
    - **Additional objective -> investigate and agree on the monitoring capabilities to be provided by the DPPO to the SP (e.g. user accesses monitoring)**
  - ⇒ Prepare briefing and suggested methods of audit to be passed on to the DPPO to allow for the proper preparation of the audit
  
- Audit of the DPPO/of D4S Foundry by the SP
  - Timing: **December 2020**
  - **Remote format required due covid-19**
  - **Adjustments required?** How to secure availability of/access to DPPO's experts?? Can initial objectives be maintained??
  - Check the implementation of the D4S DaGo (V1.2) -> "3 main zones", "user access rights", "blacklisting data", "data transfer" ...
  - Check the implementation of the data fusion -> "bucketing", "de-identification"
  - Check IT infrastructure and infosecurity -> discuss outcome of the Penetration testing executed on EASA Foundry (\*)

*\* KLM infosec has indicated wanting to perform an announced Pentesting on EASA Foundry*

*In the past, DLH infosec had as well announced their will to perform such a Pentest*

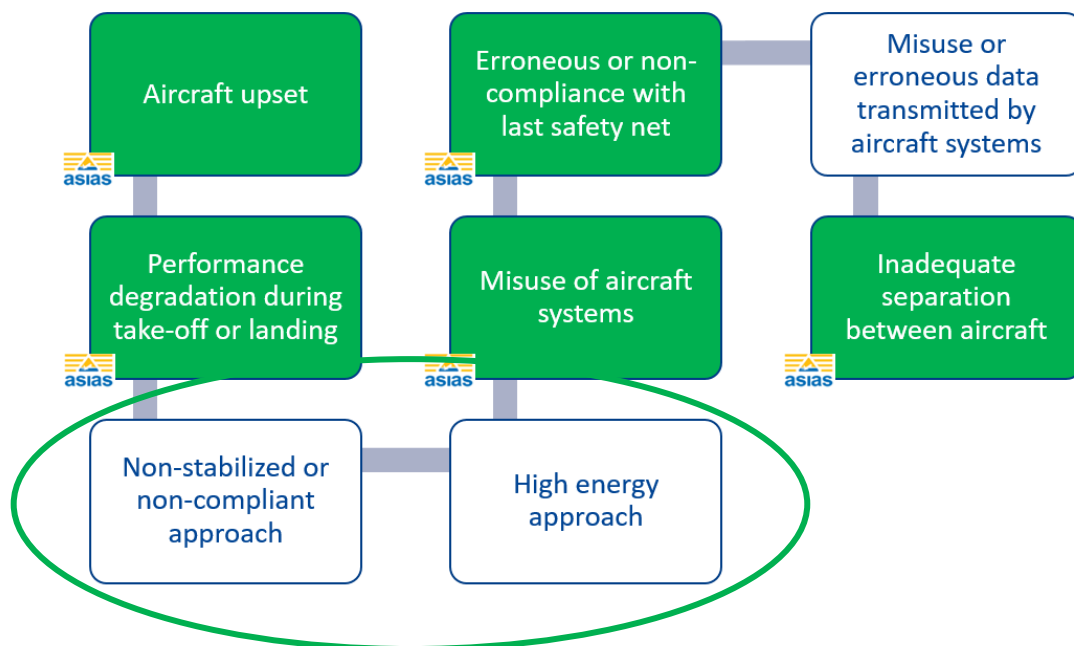

*Either one of both confirms their statement of wanting to contract such a Pentest OR the SP lead enquires within EASA if it can be contracted via that way.*

*In either case, if the Pentest is confirmed to be executed, the SP will work with DPPO to set this up in an organised, non-disruptive manner and time*

## 1. Complement the set of FDM Metrics

⇒ Approach and Landing

## 2. Explore the 1<sup>st</sup> fusion-based Metrics

⇒ MAC
